

Determinanty

$$\det(A) = \sum_{\sigma \in S_n} \text{sign}(\sigma) \prod a_{i, \sigma(i)}$$

- $\det(A) = \det(A^T)$
- $\det(A + e_i b^T) = \det(A) + \det(A + e_i(b^T - A_{*,i}))$
- $\det(A + e_i c) = c \cdot \det(A)$
- $\det(AB) = \det(BA) = \det(A)\det(B)$
- $\det(A^{-1}) = \frac{1}{\det(A)}$
- Pokud je matice A regulární tak $\det(A) \neq 0$
- Pokud jsou dva řádky matice A stejné $\det(A) = 0$
